(54) Title: ROULETTE TABLE DEVICE WITH PROGRESSIVE JACKPOT

(57) Abstract: Roulette table device with progressive jackpot, comprising a gaming table (1) designed for playing a roulette game, in which a number layout is provided on the table (1) for placing betting chips, several player positions, a croupier position, playing means for playing the roulette game, a jackpot computer unit (8, 10) for producing a progressive build-up of a jackpot during each round of a game, and a reduction of the jackpot if a jackpot has been paid out to a player position. Detection means (4, 6) are provided for detection of a dolly movement carried out by a croupier, which forms an essential part of the roulette game in each round of the game, the detection means (4, 6) being designed in such a way that on detection of the above-mentioned dolly movement during a round of a game they automatically issue an instruction to the jackpot computer unit (8, 10) for a random determination to be made on whether the jackpot can be paid out to one or more of the player positions in the round of the game concerned.
